

my particular case i guess there is a malware, that is Spinalis implant (Spinal Cord implant) would exist, they would need some sort of Matrice Operations (Jacobi Matrices?) to calculate the Body Movement. In activated when they use m99 to target me. They seem to change the sign of one axis or making me steering me into singularities after about 15 minutes after i started to do body care to make me hurt "myself". So maybe it's just one of those additional Networks that is 99.9% of the time silent, that overpowers the signal i should receive with a value something like Medulla Oblangata or Medulla has an additional minus sign for that specific Year: ???? axsis. But not yet sure about that. Inventor: ????

static public int[] toIntArray (ArrayList list)

int[] result = new int[list.size()];

for (int i = 0; i < list.size(); i++) (Number n = (Number) \(\frac{1}{2}\) \(\frac{1}2\) \(\frac{1}{2}\) \(\fr Inventor: xxxx

They also seem to have an ArrayList of things i would like to finish, things that i love to do. so of a27 does not work they play this Year: ~??? card. a27 and a27b together they are used > m7, m8 cards

If a NSA/CIA would have access to all peoples data, even the private diaries they would maybe install some AI that analyzes what the whitehat hacker just says, writes or thinks

Then they would try to match that on persons in his / her network that would get a cogntivie dissonace because of that sentence or concept knowledge even when i dont write names in my diary

CIA would possibly know what person or eg. Meyer-Briggs archetypes would rage because of what i just written into my privat diary. So it would be possible that the CIA/NSA would intentianally send this private diary entries to people to "motivate" them to

Pseudo Formula: actionRecog = patternRecog(t)

Eg, pulling over a pullover normally identifies the pullover. Especially when you have not that much input data one could dentify may objects without having a cam but only with spectral data of Wife (Tensor's) to recognize it or with FIBIt. Bewegungstelder. Then add it to the 3D Model (m98) mayb! It would take maybe a month but you could indentify maybe almost everything in a period of a month? That's maybe Pseudo Formula: actionRecog₁ ∈ Objet₁
